DETAILED ACTION

1. This communication is in response to applicant's 11/30/2000 in the application of Holtzman et al. for a "Method and apparatus for transmitting data traffic on a wireless communication channel".

Election/Restriction

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-6 and 14-19 drawn to the transmission of a single message having multiple packets. This subclass is indented under subclass 465. Subject matter wherein the system adapts to transmit only a single message formed by plural packets. Subject matter in which the transmission format changes or adapts automatically, or is programmed for changing traffic requirements, or accommodates a plurality of sources having diverse characteristics, (e.g., rates or data format), classified in **class 370, subclass 473**.

Art Unit: 2665

- II. Claims 7-13 and 20-25 drawn to the method for generic plural contiguous regions served by respective fixed stations: This subclass is indented under subclass 310 . Subject matter wherein plural nonmobile base stations provide service to different geographical areas having their boundary touching each other on a line or a point, and wherein communications between mobile units navigating in and out of the areas are regulated by the nonmobile base stations. Subject matter having details of a process or apparatus for allocating a communication channel to a user or subscriber for transmission of information, classified in **class 370, subclass 328**.

3. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II which has separate utility such as having details of a process or apparatus for allocating a communication channel to a user or subscriber for transmission of information, which does not include the particular listed of the invention I, such as details of methods or apparatus for formatting, converting, combining, or distributing information signals for transmission or reception via more than one time or frequency channel.. See MPEP § 806.05(d).

Art Unit: 2665

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37.CFR 1.143).

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).
